PROCESSES AND PACKAGING

Hall 4—Stand A59/C60

Pharmaceutical machines

CF-622x4

New modular counting system to realize high outputs from 110 up to 300 bpm. On the stand will be a CF-622x4 with a capacity up to 200 bpm depending the count and which will be available for *demonstration in a closed space and by invitation only*.

CF-622 / CF-622*2

Prototypes of a single and a double module counter CF-622 on a star wheel with in- and outfeed belts and a small footprint. The modules are completely servo driven and servo controlled and are designed for typical outputs up to 50 and 100 bpm respectively on 100 counts. At the exhibition the CF-622x2 will be shown with a return system for continuous running and demonstration.

CF-1220

The proven counting system for the pharmaceutical industry, outstanding features and widely applicable. This pharmaceutical counting and filling system process tablets, capsules, gelcaps, dragees, caplets etc. with typical outputs up to 50 bpm on 100 counts.

Special machines

TQI-4100

High speed small quantities counting machine. Ideal for producing real mixes of wrapped confectionery, lollipops, chocolate, candy and crunchy bars, snack food etc.

CZT-625

Universal counter for small products, originally designed to count seeds, but also fitting for other small products like small sweets, hardware, crystals etc.

Tel-O-Scan

A multi counter designed to count products in bulk packing. The Tel-O-Scan was originally designed – and is still used as such – for the bulb industry. However it may serve equally well on other products such as confectionery, hardware etc. in bulk packing.
